

Theiler-corrected correlation sum and the Kaplan--Yorke inequality $D_2 \leq D_{KY}$

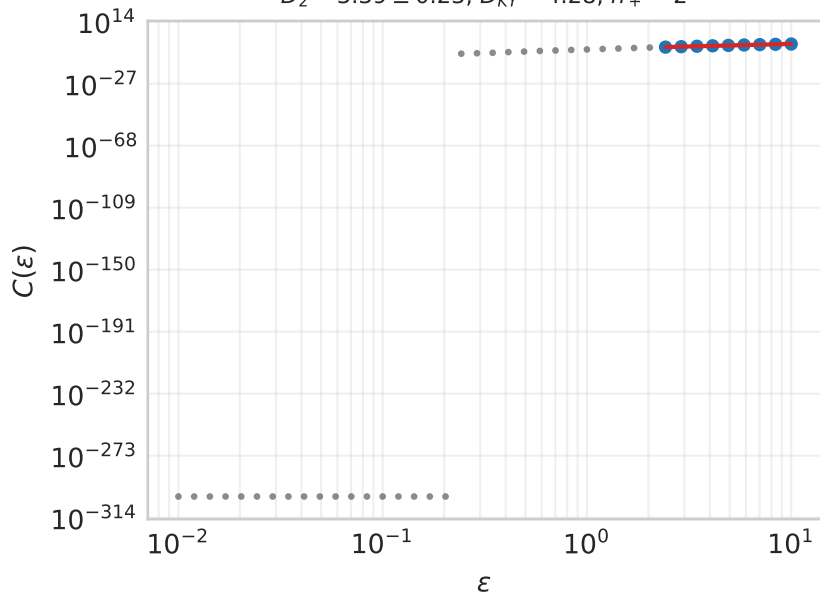

$\theta = 0.00\pi, E = 4.03$
 $D_2 = 2.33 \pm 0.29, D_{KY} = 4.21, n_+ = 2$

$\theta = 0.00\pi, E = 8.02$
 $D_2 = 2.84 \pm 0.29, D_{KY} = 4.63, n_+ = 2$

$\theta = 0.50\pi, E = 3.95$
 $D_2 = 3.39 \pm 0.23, D_{KY} = 4.28, n_+ = 2$

$\theta = 0.50\pi, E = 8.05$
 $D_2 = 3.36 \pm 0.40, D_{KY} = 4.80, n_+ = 3$
